The European Federation of Animal Science (EAAP)

Every year, the EAAP (The European Federation of Animal Science) organizes an international meeting which attracts between 900 and 2,000 people.

The main aims of the EAAP are to promote, by means of active co-operation between its members and other relevant international and national organizations, the advancement of scientific research, sustainable development and production systems; experimentation, application and extension; to improve the technical and economic conditions of the livestock sector; to promote the welfare of farm animals and the conservation of the rural environment; to control and optimise the use of natural resources in general and animal genetic resources in particular; to encourage the involvement of young scientists and technicians. Welcome to the EAAP + WAAP + INTERBULL 2023 in Lyon

On behalf of the French Organising Committee, we are very delighted to welcome you to attend the Joint International Congress on Animal Science co-organised by the European Federation of Animal Science (EAAP), the World Association for Animal production (WAAP) and Interbull to be held in Lyon, the capital of the Auvergne-Rhône-Alpes French region, from August 26th to September 1st, 2023.

The general topic of this Congress is 'Climate change, biodiversity and global sustainability of animal production'. Different sessions are jointly organised between the EAAP, WAAP, Interbull and also other partners to cover various areas of knowledge related to animal science, such as genetics, nutrition, physiology, animal health and welfare.

The Auvergne-Rhône-Alpes region covers an area of 69,711 km² in the central-east part of the south of France. It is characterised by diverse natural resources and topographies (including high mountains to the east and volcanos to the west), climates, cultures, folklore, architecture, and languages. The region accounts for 11.9% of the French economic output. It hosts 48,500 farms (with an average of 59 ha), including 51.9% of them for the production of animal products and 10.4% with both plant and animal production. About 20% and 13% of the farms concern the production of beef and milk respectively, and 11% are with sheep, goats or other herbivores. This places the Auvergne-Rhône-Alpes region 3rd in place amongst the other French regions in agriculture. The region had 13% of organic farms, 30% with other labels or quality signs and 30% with short supply chains.

Apart from the outstanding scientific programme, social activities are organised in Lyon, which was the former capital of the Gauls at the time of the Roman empire, a major economic hub during the Renaissance and today the third-largest city and second-largest metropolitan area of France. The city is known as 'the gastronomic capital of the world' and is recognised for its historical and architectural landmarks and for its universities.

The city is also known for its light festival and is a major centre for chemical, pharmaceutical and biotech industries. Several exceptional sites of the region are inscribed on the UNESCO World Heritage List including the historical district of Lyon.

We welcome you and wish you an exceptional stay in Lyon!

YoungEAAP

What is the YoungEAAP?

YoungEAAP is a group of young scientists organized under the EAAP umbrella. It aims to create a platform where scientists during their early career get the opportunity to meet and share their experiences, expectations and aspirations. This is done through activities at the Annual EAAP Meetings and social media. The large constituency and diversity of the EAAP member countries, commissions and delegates create a very important platform to stay up-to-date, close the gap between our training and the future employer expectations, while fine-tuning our skills and providing young scientists applied and industry-relevant research ideas.

Committee Members at a glance

- Ines Adriaens (president)
- Jana Obsteter (vice president)
- Giulia Gislon (secretary)

YoungEAAP promotes Young and Early Career Scientists to:

- Stay up-to-date (i.e. EAAP activities, social media);
- Close the gap between our training and the future employer expectations;
- Fine-tune our skills through EAAP meetings, expand the special young scientists' sessions, and/or start online webinars/trainings with industry and academic leaders;
- Meet to network and share our graduate school or early employment experiences;
- Develop research ideas, projects and proposals.

Who can be a Member of YoungEAAP?

All individual members of EAAP can join the YoungEAAP if they meet one of the following criteria:
Researchers under 35 years of age OR within 10 years after PhD-graduation.

Just request your membership form (ines.adriaens@kuleuven.be) and become member of this network!

Country information: France

Facts about France	
Population	68,014,000
Mainland Portugal	633,186 km ²
Atlantic coast line	3,427 km
National Languages	French
Welcome to France!	

France is a vaguely hexagonal country, located in the west of the European continent and bordered by Spain, Italy, Switzerland, Germany, Luxembourg and Belgium. The majority language spoken is French.

This small hexagon has always been a center of civilization, a crossroads of people and a natural bridge between Europe and America.

France is bathed by two seas: the Mediterranean Sea to the south, the Atlantic Ocean to the west and to the north of the island of Great Britain: the Channel Strait.

In the south, a mountain range called the Pyrenees separates France from Spain. To the east, a mountain range called the Alps separates France from Italy. Still to the east, a more modest mountain range, the Jura, separates France from Switzerland. A large European river, the Rhine, is the natural border between France and Germany.

France is rich in culture, gastronomy, traditions and festivals. With its 18 regions, each region has its own historical, cultural and gastronomic heritage. You can discover the Auvergne-Rhône Alpes region with all its traditions and historical inspirations. Some cities have medieval inspirations that give them an ancient charm.

The gastronomic culture is very important for the French, bakeries are present at every street corner. You will be able to taste the famous baguette and croissant which are so much dreamed. Let us not forget the culture of the wine. Indeed, each region produces all kind of wine. In the Auvergne Rhône Alpes region, domains such as La Chartreuse, Chateau Bizard, Domaine Autrand are very well known and famous.

Agriculture in France

In 2019, with 77.0 billion euros, France had the highest total agricultural production among the Member States (about 18% of the total production by the EU), followed by Germany (58.2 billion or 14%), Italy (57.8 billion or 14%), Spain (51.7 billion or 12%), the Netherlands (29.1 bn or 7%), Poland (26.4 billion or 6%) and Romania (19.0 billion or 5%).

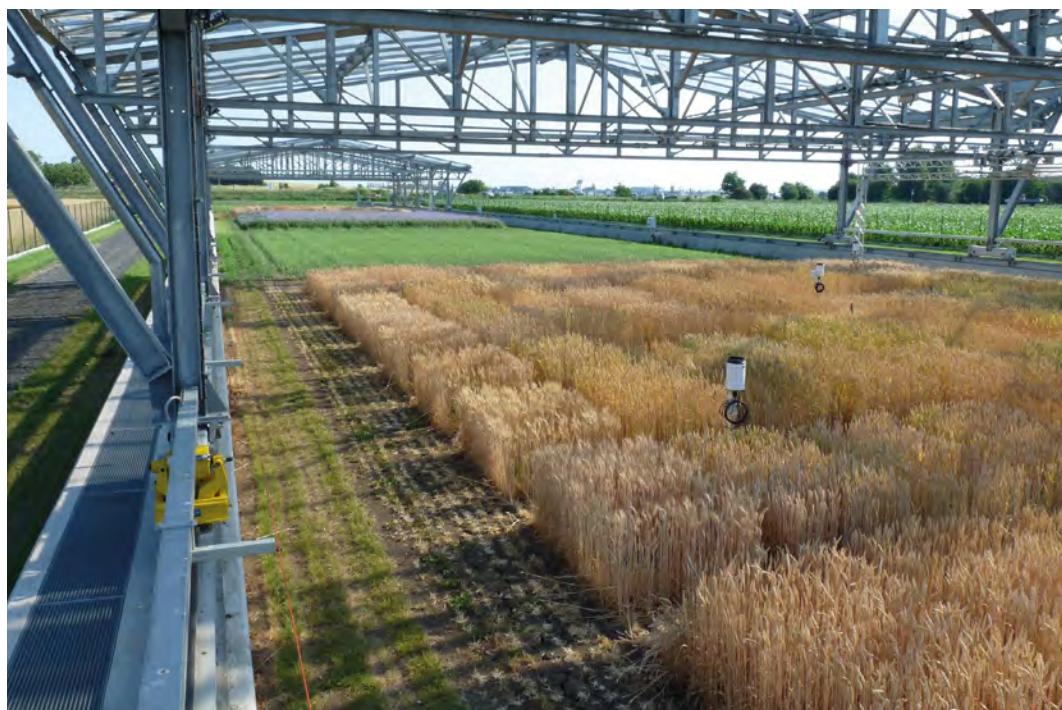

Agriculture is a source of economic growth in France: in 2019, the value generated by all agricultural and agri-food activities represented 3.4% of the French GDP. In addition, the foreign trade surplus of agri-food products was 7.8 billion euros in 2019.

Agriculture is an activity that creates jobs: in 2019, production and processing activities related to agriculture, forestry, fishing and agri-food industries employed 1.4 million people (employees and non-salaried) in full-time equivalent, or 5.2% of total national employment. In metropolitan France, women represented 30% of permanent agricultural workers in 2019.

Agriculture has a strong anchoring on the French territory: in 2020, agriculture represented 269,000 km² of the French territory. In metropolitan France, this represents 49% of the territory. In addition, France had 416,400 farms in 2020, 20% less than ten years ago. Cattle production uses 33% of the French agricultural area. The average area of French farms continues to increase to reach 69 ha in 2020 (compared to 55 ha in 2010). The French agriculture is also characterized by a growing importance of organic farming.

France has an important animal production: the country is indeed the second largest European dairy producer and the largest beef producer with the greatest diversity of bovine breeds over the World. It also has the third largest pig population (behind Germany and Spain). The main animal productions are dairy products (36% in value), bovine meat (21%), pork (13%), poultry meat (12%), eggs (6%), veal (4%) and small ruminants (3%).

About Lyon

Lyon constitutes a very interesting place to hold the EAAP + WAAP + INTERBULL congress as it is crossed by two rivers, the Rhône and the Saône, and immediately takes on a particular attraction, that of the banks and quays, walks, daydreams on the terrace, cruises, etc. The city connotes a certain sweetness of life.

The city born in 43 B.C. preserves a heritage of which its inhabitants are proud and have at heart to develop by making it live: the restaurants, the bookshops, the art galleries or the second-hand shops that enliven the Vieux-Lyon are just a few examples.

One of its most popular attractions, the Parc de la Tête d'Or, adjacent to the convention center, is the largest urban park in France. Totally dedicated to leisure, discovery and relaxation, its green spaces are the scene of many activities: zoos, rides, stores, shows, pony rides, botanical gardens, etc. Everything is gathered to make your visit a magical moment. Young and old children, tourists, sportsmen or simple walkers, everyone will find his happiness there.

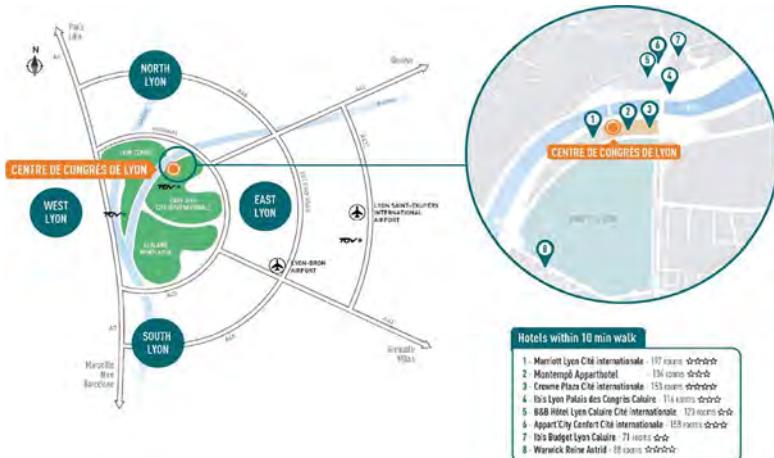

The Auvergne-Rhône-Alpes region offers a wide range of destinations such as the Alps and Mont Blanc, the roof of Europe, the Drôme and Ardèche, evocative of Provence, and the Auvergne and its volcanoes, where many regional research INRAE laboratories are located.

Lyon, internationally known as the capital of gastronomy, as well as its region, have very popular and famous culinary meat and fish specialties such as the pâté en croute (pâté baked in a crust), the brioche sausage, the Poule de Bresse or even the Lyon quenelle (pike quenelles often served with a crayfish sauce). The region also offers beef meat from breeds adapted to the terroir such as Charolaise, Limousine, Salers, Aubrac.

It will also be the occasion to taste the regional wines in agreement with some of the twenty cheeses AOC (protected designation of origin) of the region such as the Fourme d'Ambert, the Reblochon, the Beaufort, the Abondance, the Saint-Nectaire, the Salers, etc.

The Organising Committee of the 74th EAAP Annual Meeting will do its utmost to help authors for their presentations and to facilitate their arrival and stay at the congress.

Please take a few minutes to read the following guidelines regarding the on-site organisation of the congress for the smooth running of the sessions.

Oral presentations

After having picked-up your badge at the Welcome Area, you need to go give your presentation file to the technicians in the Preview room located in the Welcome Area.

Please be sure to upload your presentation at least half a day before your scheduled oral presentation. All presentations scheduled for Monday morning must be uploaded on Sunday.

The preview room will be open from Sunday 27th to Thursday 31st from 08:00 to 18:00.

1. Technical guideline

Presentation format

The file for your oral presentation must be created in a PowerPoint file (.ppt or .pptx). Your presentation should be composed of slides in a landscape format 16:9 according to your allocated time (on average 15 slides for 15 mins and 30 slide for 30 mins).

You will not be allowed to use your personal computer in the conference room.

If you insert images or pictures they must be in the following format: .jpg, or .gif (.pict prohibited) and must be in high definition to allow efficient viewing. Images/pictures resolution should be 1920×1080 minimum (width by height).

If you have video files attached to your power point presentation they must be in the following format: .mpg, .mpeg, .avi, .wmv or .mov and must be saved in the same folder as the presentation.

And do not forget, when saving your final presentation on a USB device, to make sure to include your video files if any, and all links to these multimedia files.

If you operate under Mac:

Oral communications in Macintosh format are supported by the preview system after on-site conversion:

- Please allow sufficient time for conversion of Macintosh files to a format compatible with the pre-projection system.
- Conversion of Keynote presentations with specific animations is not guaranteed.
- Prefer Windows-compatible fonts

The fonts installed on the workstations (pre-projection and rooms) support standard Western European characters.

In the conference room

The computer equipment available in the conference rooms is strictly identical to that in the pre-projection room. A computer screen on the lectern allows you to follow the presentation without having to turn towards the screen. In the event of technical problems, please contact the technical staff in the room, who will take appropriate action.

Each conference room is equipped with the following:

- A video projection system
- Laptop computer with mouse

Click on your name to open your oral presentation and press the 'Escape' key to return to the main menu at the end of your presentation.

Do not come at the last minute in the meeting room hoping to connect your own laptop or your USB key: you will NOT be able to connect it. You should go to the preview room.

Duration of your presentation

Please respect the time allotted to your presentation.

Do not go over the time limit and remember to save time for discussion. Remember to speak directly into the microphone at a suitable speed for everybody to understand.

Official language

The official language of the Congress is English, which means that all presentations and questions must be delivered in English.

2. Authors disclosure of potential conflicts of interest

Except for talks from sponsors, the Scientific Committee requires that all presentations should be as free of commercial bias as possible and free of any information on commercial products or services.

The poster should be printed by the participants.

Please indicate the number of your abstract to the staff in the poster room for installation.

The number of your poster will be displayed on the top of the panel.

Organization of scientific programme

In the 'Room Overview' section (pages 19-23) several abbreviations are shown which are to do with the organization of the various sessions. These are explained below.

EAAP Commissions

The Scientific Programme of the EAAP Annual Meeting is organized by the Scientific Committee of EAAP, chaired by the Vice-President for Scientific Affairs, Dr Johannes Sölkner. Science for people, life & earth

The French National Research Institute for Agriculture, Food, and Environment (INRAE) is a major player globally in **research and innovation on agriculture, food and the environment**. It is a community of 12,000 people with 273 research, experimental research, and support units located in 18 regional centres throughout France.

Internationally, **INRAE is among the top research organisations in the agricultural and food sciences, plant and animal sciences, as well as in ecology and environmental science**. INRAE's goal is to be a key player in providing the knowledge base supporting the necessary acceleration of agricultural, food and environmental transitions, to address the major global challenges.

At last... a trace mineral source that improves digestibility!

Are your trace minerals making your dairy cows efficient?

Increasing feed efficiency of dairy cows means more milk is being produced out of the same amount of feed. For optimal performance, cows need a healthy rumen that digests fibre efficiently.

Peer reviewed research shows that completely replacing sulphates with IntelliBond improves fibre digestibility^[1,2,3,4,5,6,7,8,9] and can increase milk production^[9,10].

Ask your nutritionist about the benefits of switching to a diet 100% free from sulphate trace minerals.

Founded on 9 October 1979 at the initiative of representative organisations in the cattle sector, INTERBEV was recognised on November 18th, 1980 as an interbranch organisation for meat and livestock by ministerial decree.

INTERBEV'S KEY OBJECTIVES :

REPRESENTATION

INTERBEV acts as a genuine spokesperson for the livestock and meat sector. As a "from the field to the fork" inter-professional organisation, INTERBEV has a large representation to make the voice of all the bovine, calf, sheep, horse and goat professionals heard in all instances nationally or internationally. This representation, recognised by all those involved with INTERBEV and by its National Organisations, gives it a leading role in defending the interests of the entire sector.

DIALOGUE

INTERBEV is duty bound to define common positions to the 22 National Organisations that it is composed of. Dialogue is a key objective of the inter-professional organisation and as the interests of professional federations sometimes differ, it is essential that INTERBEV provides the possibility for exchanges, discussions and common reflections, with its first objective being to identify a consensus. The ability of the meat industry to organise itself and enter into dialogue gives weight to the inter-professional organisation's messages since they represent the position of all those involved in the industry.

COMMUNICATION

Lifestyles are changing as are the eating habits of the French who are increasingly adopting a responsible attitude to eating. This has been observed for some years by professionals within the livestock and meat sector, who are all members of INTERBEV, and are committed to facing the new challenges of sustainability through their collective approach to social responsibility: the Pact for Social Commitment. The PACT also aims at the promise of enhanced meat quality, one of the industry's objectives resulting from the French National Food Conference. To promote this, the inter-professional organisation launched a collective communication campaign entitled "LOVE MEAT, EAT BETTER", signed "Naturally Flexitarian".

INTERBEV'S STRATEGIC FOUNDATION

The inter-professional organisation's strategic base set up by INTERBEV in 2017, is a collective approach to social responsibility, integrating the industry's plans set out at the French National Food Conference (États Généraux de l'Alimentation). This strategy, called PACTE, is based on 5 core values: Progress, Future, Dialogue, Transparency and Expertise.

Its objective is to provide a global response to the expectations of society and those involved in the industry in terms of good production and consumption practices, with evidence and guarantees in support of this. It aims to highlight the strengths of the sector, to identify areas for improvement by working particularly with environmental and animal welfare NGOs and to use collective tools, in order to provide sustainable food.

This approach is under the guidance of the internationally recognised ISO 26000 standard, entitled Social Responsibility. In 2018 INTERBEV was the first food industry inter-professional organisation to be awarded a level 3 out of 4 AFNOR certificate "CSR commitment confirmed", later confirmed in 2021.
